G. Joseph, MD from AZ, reports on a 55-year-old male patient who had a constant flare up of Ulcerative Colitis. He was scheduled for a colostomy but instead he took Digestron, Asparagus Ext., etc. and said, “To my surprise after 30 days, I had stopped bleeding. After a year and a half I was off the Prednisone completely for the first time in 9 years. I am currently happy to report that I am two years older, have my colon and am leading a very normal life.”

Y. Dikansky, NMD, DDS from NY, reports on a 45-year-old female who had severe digestion problems (diarrhea) even while taking digestive enzymes for over 10 yrs. Then Dr. Dikansky suggested Digestron to replace the digestive enzymes. After 3 days her diarrhea stopped, her energy increased & she gained weight. Each time she tried digestive enzymes instead of Digestron, her diarrhea returns.
Colitis, diverticulitis and Crohn’s disease are autoimmune conditions associated with overexpression of certain proteins that cause inflammation in the colon and intestines. Those who suffer from these diseases may also be gluten intolerant. Diverticulitis patients, in particular, cannot eat seeds as these can wedge into the small pouches lining the colon.

**GI Chi** contains herbs traditionally used for various gastrointestinal conditions. It has mostly been used for chronic colitis, Irritable Bowel Syndrome and Crohn’s disease. It has also been recommended for GI infections and diarrhea. It has antimicrobial effect against *E. coli*, *Streptococcus*, and *Spirillum*. It also has anti-pathogenic activity against viruses, fungi (candida), protozoans (trichomonads), helminths, and Chlamydia. For best results, GI Chi should be taken immediately at the first sign of a GI infection.

**Digestron** has been shown to be effective for IBS and diverticulitis/colitis. In 952 cases of these conditions, Digestron was effective in 45.4% of the cases, on average, within 3 months of use.

**Psoricaid** is an herbal supplement that inhibits inflammatory cytokines overexpressed in Crohn’s disease and colitis. These diseases are known to over express specific cytokines, namely tumor necrosis alpha (TNF-alpha) and interleukin-1 (IL-1). In one in vivo study, Psoricaid was compared to Celebrex, an anti-inflammatory drug. Results show that Psoricaid was better at inhibiting the production of TNF-alpha and IL-1 than Celebrex.

**Case reports:**

J. Iannetta, DC from ME, has a 40 y/o/m patient diagnosed with Crohn’s disease and was using steroids for medication. The steroids were discontinued. Instead, Dr. Iannetta recommended Digestron, Psoricaid and GI Chi. The patient’s Crohn’s disease subsided.

G. Joseph, MD from AZ, reports on a 55 y/o/m patient who had a constant flare up of Ulcerative Colitis. He was scheduled for a colostomy but instead he took Digestron, GI Chi, etc. and said, “To my surprise after 30 days, I had stopped bleeding. After a year and a half I was off the Prednisone completely for the first time in 9 years. I am currently happy to report that I am two years older, have my colon and am leading a very normal life.”

C. Chrencik, DC from AL, suffered from diverticulosis and anemia. Due to his anemia and extreme weakness, he couldn’t have surgery. Then he took GI Chi, Digestron, Psoricaid, and CFC for the diverticulitis and Chi-F, Chi Energy and Asparagus Extract for anemia. A year later, his hematocrit increased from 26 to 34 and his hemoglobin level increased from 8 to 12. Since he didn’t have diverticulosis anymore and his anemia had improved, then surgery was not needed at all.

K. Hajduk, DC from CA, has a patient who ate an expired salad dressing causing severe diarrhea. He right away took GI Chi. After taking 3 capsules, 3 times for one day, the diarrhea almost stopped. After 5 days, the symptoms are completely gone.

R. Welch, DC from CA, reports on a 45 y/o/m patient who has had stomach/intestinal problems for 30 years. He had almost given up on all digestive medications and dietary supplement until he tried Digestron, GI Chi, CFC, and Liver Chi. After only a week, he could feel a difference already. After 3 months, his chronic pain, headaches and digestive problems disappeared!

R. S., 67 y/o/m from CA, had digestive problems two years ago: he had trouble swallowing, had pain in his esophagus and couldn’t eat. He lost so much weight. After taking Digestron, Liver Chi, Angiostop, and Revivin, for 6 months, he had no more pain and can eat normally again. He even gained his weight back.
