

## Mineral Infrared Frequency Device (MIT)

The Mineral Infrared Frequency Device with portioned electromagnetic spectrum is an entirely new concept in medical technology. In essence, the device functions to promote metabolism, regulate physiological deficiencies, diminish and heal inflammations and relieve pains. New applications for its healing properties are continually being discovered.

Early in 1970, an odd and interesting phenomenon was noted at a century old ceramic factory in a rural area in central China. This factory offered extremely poor working conditions and the workers stood in mud throughout much of their workday. The manager was concerned that the workers would be troubled with arthritis and other related ailments due to standing on the sodden floor for long periods of time.

However, the ensuing investigation disclosed that the opposite was true. There was not one single case of arthritis among the workers. In fact the workers were not only healthy, but led significantly longer lives than the norm.

By 1979, 36 universities, 45 graduate schools, 41 research institutes, 259 hospitals and three thousand medical doctors formed an international society to perform clinical studies related to the effects of the MIT.

Scientists, using a spectrometer, discovered a strong, unique spectrum with a wavelength range of 2 to 25 micrometers, which is a narrow band of infrared spectrum. After being studied, it was learned that the kiln produced temperatures over 400 degrees Celsius. A black deposit fused to the conveyor belt emitted the frequency. It contained 33 different trace elements such as Fe, Se, Mn, Zn, Co, Ni, Cu, Cr, K, etc in various chemical binding forms.

This frequency has been utilized in a lamp device that is now being used to treat human disease and ailments. It was awarded the gold medal at the 1986 Zagreb International Fair in Yugoslavia. Also in 1986 it won the Silver Medal at the 35<sup>th</sup> Brussels Eureka World Fair for inventions. Since then it has been in regular use by many national athletic troops, including ballet, soccer, martial arts and the famous China Women's Volleyball Olympic Teams members, champions of the 1984 Los Angeles Olympics. Tennis star Michael Chang and actor Dennis Weaver have used it.

In 1988, the FDA for use in the United States registered the device. Since then, thousands of American doctors have treated millions of patients with this incredible device. The MIT is better than any existing devices on the market for its safe multi-function features, which are even able to treat the face and the C1, C2, and C3 points on the vertebra.

The significant difference between the MIT and the conventional infrared device and microwave therapeutic appliances is the MIT's round plate that is coated with a

proprietary mineral formulation consisting of 33 trace elements essential to living organisms and the human body.

When the mineral plate is activated by the devices built-in electric-heating element, the coated plate emits a special band of electromagnetic waves that coincide with the wavelengths and intensity of the electromagnetic waves released by the human body, and absorbed by the human body through a process called selective absorption. This absorbed electromagnetic energy has been found to yield therapeutic effects on the human body by:

1. Assisting to generate various beneficial biochemical stimuli that the body may lack due to illness or injury.
2. Accelerating general circulation and microcirculation to maintain a healthy rate of cellular activity and metabolic activity and speed the process of decomposition or unstable structures, such as dead cells.
3. Enhancing the body's immunity levels and adjusting and balancing its hormonal levels.

**These biological functions allow the MIT to give users effects such as:**

- **The relief of muscular aches and pains caused by arthritis and soft tissue injuries.**
- **The alleviation of inflammation and edema from soft tissue injuries.**
- **The assistance in the healing of skin disorders**
- **The balancing of the nervous system.**
- **The promotion of healing effects on internal organs**
- **The treatment of bone fractures**

This unique device was invented by a physician in California is registered by the FDA in the United States. The device is safe and easy to operate. Over 10,000 doctors are currently using this device in the United States. Chi Analysis is pleased to offer this Mineral Infrared Frequency Device (MIT) for sale at a price of only \$1400.00.
